Fund Description

The Thrivent Income Fund invests primarily in investment-grade corporate bonds, government bonds, asset-backed securities, and mortgage-backed securities. The Fund may also invest a portion of its assets in high yield bonds, leveraged loans and preferred stock, and may opportunistically invest in foreign issuers, non-agency mortgage-backed securities and commercial mortgage-backed securities. The Fund typically has its largest allocation in BBB-rated bonds, which are the lowest-tier of investment grade bonds.

Investment Strategy/Process

The portfolio management team seeks to add value through security selection and active management, and monitors risk in an effort to build a well-diversified portfolio. The team uses fundamental, quantitative and technical investment research techniques to determine which securities to buy and sell. The Fund's investment adviser may purchase bonds of any maturity and generally focuses on U.S. companies that it believes are financially sound and have strong cash flows and earnings. The team also considers the macro-economic environment and performs an ongoing assessment of relative value and risk. Based on this market outlook, the Fund may take overweight and underweight positions in various sectors and industries and may reallocate across the higher and lower-quality segments of the bond market. The Thrivent fixed income analysts perform research and provide buy/sell recommendations while the portfolio manager is responsible for portfolio construction and risk management.

Risks: The Fund primarily invests in investment-grade corporate bonds, government bonds, asset-backed securities and mortgage-backed securities. The value of the Fund is influenced by factors impacting the overall market, certain asset classes, certain investment styles, and specific issuers. The Fund may incur losses due to incorrect assessments of investments by its investment adviser. Bond prices generally fall as interest rates rise. Credit risk is the risk that an issuer of a debt security may not pay its debt, and high yield securities are subject to increased credit risk as well as liquidity risk. The value of mortgage-related and other asset-backed securities will be influenced by the factors affecting the housing market and the assets underlying such securities. Foreign investments involve additional risks, including currency fluctuations, liquidity, political, economic and market instability, and different legal and accounting standards. The prices of futures contracts can be highly volatile and the loss from investing in them can exceed the initial investment. Dealer inventories of bonds are at or near historic lows in relation to market size, which has the potential to decrease liquidity and increase price volatility in the fixed income markets. To the extent that the financials sector continues to represent a significant portion of the Fund, the Fund will be sensitive to changes in, and its performance may depend to a greater extent on, factors impacting this sector.
