

Thrivent Diversified Income Plus Fund

Inception Date Jan. 08, 1997 **Ticker** AAHYX **Total Fund Assets** \$1.02 billion **Expense Ratio** Gross: 0.95%

Fund Description

This fund looks to provide a steady and dependable income stream along with modest capital appreciation. It invests in higher-yielding, higher-risk, fixed income securities to generate income, and in equities to provide potential growth and income. Investments are diversified across sectors in order to manage risk and potentially provide more stability when interest rates rise. The Fund is actively managed and invests in a combination of other funds managed by the Adviser and direct investments in equity and debt instruments.

Investment Strategy/Process

The Fund has a long-term target allocation of 80% fixed income and 20% equity securities. The portfolio management team actively manages the Fund with overweight and underweight positions in various sectors based on their views of the market and economy. Individual stocks and bonds are analyzed and chosen on an ongoing basis. The Fund is regularly rebalanced to ensure that the holdings are within appropriate ranges.

All data represents past performance. Past performance does not guarantee future results. The investment return and principal value of the investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than the original cost. Current performance may be lower or higher than the performance data quoted. Call 800-847-4836 or visit thriventfunds.com for performance results current to the most recent month-end.

Performance shown assumes the reinvestment of all dividends and capital gains. Other share class performance may vary due to differences in expenses.

**The Morningstar average represents the average total return annualized when greater than one year for all reported funds in the category. Morningstar averages do not include sales charges/fees. If included, returns would have been lower.

Risks: Debt securities are subject to risks such as declining prices during periods of rising interest rates and credit risk, or the risk that an issuer may not pay its debt. The Fund's value is influenced by a number of factors, including the performance of the broader market, the effectiveness of the Adviser's allocation strategy, and risks specific to the Fund's asset classes, investment styles, and issuers. The Adviser is also subject to actual or potential conflicts of interest. The use of derivatives (such as futures) involves additional risks and transaction costs. Foreign investments involve additional risks, such as currency fluctuations and political, economic and market instability, which may be magnified for investments in emerging markets. High yield securities are subject to increased credit risk as well as liquidity risk. The Adviser's assessment of investments may prove incorrect, resulting in losses or poor performance. Leveraged loans, preferred securities, sovereign debt, and mortgage-related and other asset-backed securities are subject to additional risks. The London Interbank Offered Rate (LIBOR) is being phased out, which brings uncertainty to instruments tied to it. When bond inventories are low in relation to the market size, there is the potential for decreased liquidity and increased price volatility. Securities markets generally tend to move in cycles with periods when security prices rise and periods when security prices decline. The Fund invests in other funds; therefore, the Fund is dependent upon the performance of the other funds and is subject to the risks, additional fees and expenses of the other funds. The Fund may engage in active and frequent trading of portfolio securities, which may result in higher transaction costs and higher taxes. When interest rates fall, certain obligations will be paid off more quickly and proceeds may have to be invested in securities with lower yields. The use of quantitative investing techniques also involves risks. These and other risks are described in the prospectus.
