Fund Description

This fund seeks to provide investors with competitive performance through favorable stock selection while monitoring risk. The Fund typically invests in small-sized companies across the growth spectrum. Growth stocks are companies whose earnings are expected to grow at an above-average rate relative to the market. Small-sized companies may have the opportunity to grow more rapidly than larger companies as they potentially emerge from a small to a medium-sized company. However, they typically do not pay significant dividends to shareholders and instead reinvest earnings back into the company. Smaller companies typically have greater volatility (or more risk) because they are often less seasoned, have narrower product lines, less liquidity, smaller revenues and fewer resources than larger companies.

Investment Strategy/Process

The portfolio management team seeks to add value through stock selection and active management, and monitors risk in an effort to build a well-diversified portfolio. The team uses fundamental, quantitative, and technical investment research techniques to identify and purchase small companies that the team believes could grow their revenue and earnings faster than their peers, along with companies that could sustain growth over time.

Risks: Smaller, less seasoned companies often have greater price volatility, lower trading volume, and less liquidity than larger, more established companies. The Fund's value is influenced by a number of factors, including the performance of the broader market, and risks specific to the Fund's asset classes, investment styles, and issuers. The Adviser's assessment of investments may prove incorrect, resulting in losses or poor performance. Securities markets generally tend to move in cycles with periods when security prices rise and periods when security prices decline. Common stocks of companies that rely extensively on technology, science or communications in their product development or operations may be more volatile than the overall stock market and may or may not move in tandem with the overall stock market. These and other risks are described in the prospectus.
