Fund Description

This Fund is managed as a government money market fund according to rules established by the Securities and Exchange Commission (SEC) that are designed so that the Fund may maintain a stable, \$1.00 share price. Those rules generally require the Fund to invest only in high quality securities that are denominated in U.S. dollars and have short remaining maturities. The Fund is also required to maintain a dollar-weighted average maturity of not more than 60 days and a dollar-weighted average life of not more than 120 days.

Investment Strategy/Process

The portfolio management team seeks to produce current income while maintaining liquidity by investing at least 99.5% of its total assets in U.S. government securities, cash and repurchase agreements collateralized fully by government securities or cash. The Adviser invests in securities by selecting from the available supply of short-term government securities based on its interest rate outlook. Although the Fund frequently holds securities until maturity, the Adviser may sell securities to increase liquidity.
