Fund Description

Thrivent Balanced Income Plus Fund provides a balanced approach to income and capital appreciation. Approximately half of the portfolio is invested in equity securities to provide potential growth, while the other half of the portfolio is invested in higher-yielding, higher-risk, fixed-income securities to generate income. Investments are diversified across sectors in order to manage risk, potentially provide more stability when interest rates rise, and to provide the opportunity for long-term capital growth and income.

Investment Strategy/Process

The Fund has a long-term target allocation of 50% equity securities and 50% fixed-income. The portfolio management team actively manages the Fund with overweight and underweight positions in the various sectors based on their views of the market and economy. Individual stocks and bonds are analyzed and selected on an ongoing basis. The Fund is regularly rebalanced to ensure that the holdings are within appropriate ranges. Prior to August 16, 2013, the Fund was named Thrivent Balanced Fund. It invested in a balanced mix of stocks, bonds and cash alternatives. On August 16, 2013, the Fund adopted its current name and investment strategy, which includes the ability to invest a greater portion of its assets in higher-yielding fixed-income securities.

Investment Objective

Thrivent Balanced Income Plus Fund seeks long-term total return through a balance between income and the potential for long-term capital growth.

Who Should Consider Investing?

The Fund may be suitable for investors who:

- Seek a balance of income and the opportunity for long-term growth.
- Have a medium to long-term investment time horizon and a moderate risk tolerance.
- Are able to withstand a moderate level of risk and volatility in pursuit of moderate long-term returns.

Risks: The Fund invests in debt securities and equity securities. The value of the Fund is influenced by factors impacting the overall market, certain asset classes, certain investment styles, and specific issuers. The Fund may incur losses due to investments that do not perform as anticipated by the investment adviser. Bond prices may decline during periods of rising interest rates. Credit risk is the risk that an issuer of a debt security may not pay its debt, and high yield securities are subject to increased credit risk as well as liquidity risk. Leveraged loans, REITs, preferred securities, convertible securities, sovereign debt, and mortgage-related and other asset-backed securities are subject to additional risks. Foreign investments involve additional risks, including currency fluctuations, liquidity, political, economic and market instability, and different legal and accounting standards; these risks are magnified for investments in emerging-markets. An ETF is subject to additional fees and expenses, tracking error, and the risks of the underlying investments that it holds. The use of derivatives (such as futures and swaps) involves additional risks and transaction costs, which could leave the Fund in a worse position than if it had not used these instruments. The Fund may engage in active and frequent trading of portfolio securities in implementing its principal investment strategies, which may result in higher transaction costs and higher taxes.
