

# THRIVENT MULTIDIMENSIONAL INCOME FUND

TMLDX | CLASS S

## Fund Key Points

### Thrivent Multidimensional Income Fund

is highly diversified across income-producing securities and may provide increased yield and diversification to a core bond portfolio.

#### Diversified and tactical

This mutual fund has the majority of its assets invested in securities that produce a high level of income. The portfolio manager makes tactical adjustments as market conditions change. The Fund is expected to have a lower correlation to traditional fixed income securities such as corporates or government bonds but will also have higher risk.

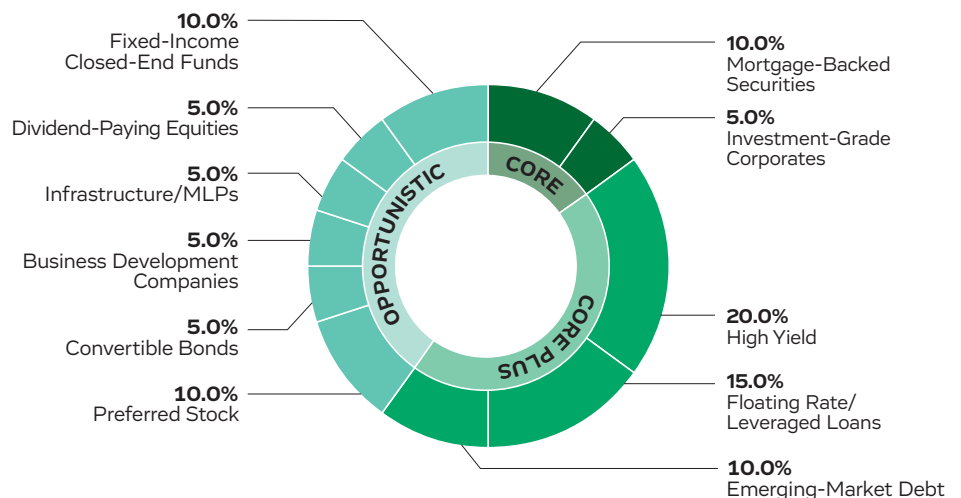

#### Seeks high income

The largest segment of the portfolio is allocated to “core plus” sectors that have traditionally produced high levels of income. The Fund also invests opportunistically in non-traditional asset classes that the portfolio manager believes will produce a high level of income and growth. At the core is a small allocation to traditional fixed-income securities to help reduce volatility.

#### A tested team

The Fund is managed in a style similar to other Thrivent Mutual Funds, including the series of Thrivent Income Plus Funds. The team makes tactical allocations based on valuations and yields, while sector analysts are responsible for thoroughly researching securities and finding new opportunities.

## Long-term Target Allocation\*

\*Allocations subject to change.

**Risks:** The Fund allocates its assets across multiple income and growth producing asset classes and strategies. The value of the Fund is influenced by factors impacting the overall market, certain asset classes, certain investment styles, and specific issuers. The Fund may incur losses due to incorrect assessments of investments by its investment adviser. It is also subject to volatility risk, or the risk that the value of the Fund's shares may fluctuate significantly in the short term. Bond prices generally fall as interest rates rise. Credit risk is the risk that an issuer of a debt security may not pay its debt, and high yield securities are subject to increased credit risk as well as liquidity risk. Leveraged loans, closed-end funds, BDCs, MLPs, REITs, preferred securities, convertible securities, sovereign debt, and mortgage-related and other asset-backed securities are subject to additional risks. Foreign investments involve additional risks, including currency fluctuations, liquidity, political, economic and market instability, and different legal and accounting standards; these risks are magnified for investments in emerging markets. An ETF is subject to additional fees and expenses, tracking error, and the risks of the underlying investments that it holds. The use of derivatives (such as futures and swaps) involves additional risks and transaction costs, which could leave the Fund in a worse position than if it had not used these instruments.

**FUND OBJECTIVE:** Thrivent Multidimensional Income Fund seeks a high level of current income and, secondarily, growth of capital.<sup>1</sup>

## OPPORTUNISTIC ASSET CLASS ANNUAL PERFORMANCE (%) | 2008 – 2017

› The indexes shown below represent the six asset classes that make up the opportunistic portion of this Fund. As you can see, different asset classes outperform and underperform from year to year, which illustrates the value of holding a well-diversified portfolio. However, while diversification can help reduce risk, it cannot eliminate it.
